HowTo: Connecting to MPIfG Mail on your Android smartphone

Adding and configuring an account on your Android smartphone to read e-mail from the MPIfG mail server.

Getting Started

In this short tutorial we will show you how to setup an account on your android smartphone to connect it to your MPIfG mail account. If this is done successfully, you will be able to read your MPIfG mails, contacts and calendar events on your mobile device.

The screenshots were taken on a LG G3, with Android 4.

First, enter the “Settings” of your phone and choose “Accounts & sync”. You will find it under the term "General".

You will see your active Accounts and a "Add account" button. Push it.
Choose “Microsoft Exchange”, you will get to the next step automatically.

Enter your MPIfG mail address in this way: Userid@mpifg.de

Enter your password and choose “Next”, you may proof yourself and show you your password.

You will be asked for Domain and username. Please enter like the example in the screenshot: “mpifg”. The name of the exchange server is mail.mpifg.de. Now push "Next"
Choose “yes” and read the terms and your properties if you want to.

After all this your account is nearly ready to use in this screen you can optially edit your synchronisation and how often and how your phone will message you because of your new E-Mails.
